

## MHTM™ MicroDrive Accessories

### Service module (SM01)

The Service module SM01 is a multifunctional tool for MHTM™ MicroDrive barriers. It is being connected to the service port of the MGC-/MGC Pro controller by means of a cable.

It is primarily being used to download software packages to MGC-/MGC Pro controllers. Additionally, it is possible to read out and save parameters and transfer them to other controllers.

Software updates for MGC-/MGC PRO controllers can easily be transferred from a PC to the Service Module via USB. The Service module is recognized under Windows as a removable disk drive. No special hardware drivers need to be installed.

The Service module is either powered by the service port of the MGC-/MGC Pro controller or via USB. Thus, no additional power supply is necessary.

#### Technical Data

Power supply	via USB or CAN
Interface ports	USB, CAN (service interface port MGC)
Electrical separation	CAN-interface, galvanically isolated
Operating controls	1 push-button, 3 status LEDs
CAN termination	sliding switch

#### Supported Barrier Types

Magnetic.Access	all
Magnetic.Parking	all
Magnetic.Toll	all
