Traffic Signal Heads

SIGNAL-24RG

- Increases visibilty of opened/closed barrier arms
- Two 4.25” lenses
- Long-lasting LED lights
- Polypropylene housing
- Compatible with all MHTM™ MicroDrive barriers
- Available MSSIGNAL01 mounting kit for installation on barrier housing

The traffic signal heads are mainly used to increase the visibility of closed or opened barrier arms when combined with a preceding red signal when closing. The traffic signal head SIGNAL-24RG has two separate lights which utilize LED technology. The traffic signal heads can be used in combination with all MHTM™ MicroDrive barriers.

The available mounting kit MSSIGNAL01 for traffic signal heads is designed for fixing the signal heads directly to the barrier housing. Thus, this solution is particularly suitable where space is limited. The kit includes a round mast of aluminum with a height of 86.6 inch and a 3 inch diameter. The mast is powder-coated in RAL 9010 (white). When controlling the signal heads via the control unit of the barrier no additional relays are required.
