

MGC Control Module

Radio Control 433 MHz (FM02-AM) (USA only)

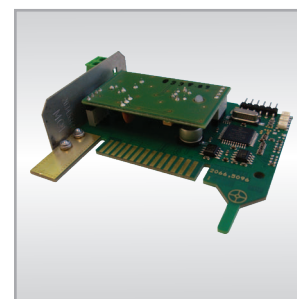

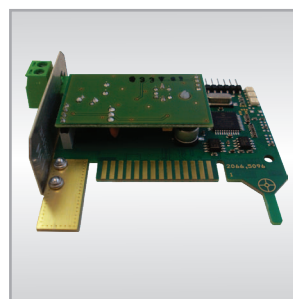

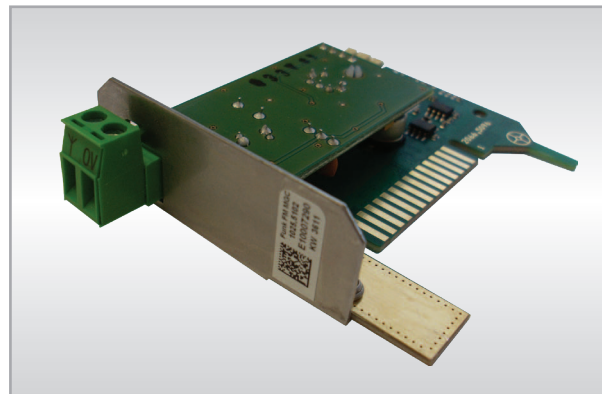

The FM02 Radio Control Module is a 433 MHz radio receiver for MHTM™ MicroDrive barriers. It can be plugged directly into the logic controller (Plug & Play).

The module allows, depending on the selected operating mode, the opening, the opening with high priority and the closing of the barrier via hand transmitters.

Two buttons of a 2-channel or 4-channel hand transmitter can be assigned to a radio control module. For example, the first button can be allocated to the function „open“, the second button to the function „close“.

Teaching in the hand transmitters can be done easily via a menu of the MGC controller.

Deleting individual hand transmitters from the system can be achieved without the hand transmitter being present. Therefore, e. g. lost or stolen hand transmitters can be easily deactivated.

Technical Data

Current consumption	20 mA
Frequency	433 MHz
HF modulation	AM
Number of storable transmitters	100
Connector antenna	Pluggable screw terminals

Supported Barrier Types

Magnetic.Access	all
Magnetic.Parking	all
Magnetic.Toll	all
